BEST CHOICE FOR PROCESS AND TEMPERATURE CONTROL

Application: Control temperature, humidity, pressure, flow and PH.

FY series controllers are microprocessor based controllers. Which have been designed with high accuracy input, various output selection, useful options and good reliability at a competitive price.

FY series use "PID+FUZZY" algorithm to implement excellent control. The output status is displayed on the built in "Bar-Graph" display.

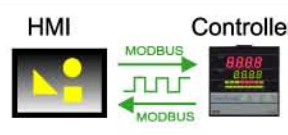

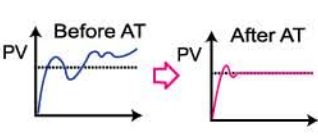

FY series not only provide the basic control output selections but also plus advanced options such as "Motor Valve Control", "SCR/TRIAC Trigger", and "Programmable RAMP/SOAK".

FY series support MODBUS protocol. Communication with HMI is more convenient. New additional HBA function with competitive price, user can upgrade system safety easy.

Available in 7 sizes, the models and sizes are as below:

- FY400: 48X48mm (DIN 1/16)
- FY600/800: 48X96mm (DIN 1/8)
- FY700: 72X72mm (DIN 1/16)
- FY900: 96X96mm (DIN 1/4)
- FY100: 175X110mm
- FY101: 90X90mm

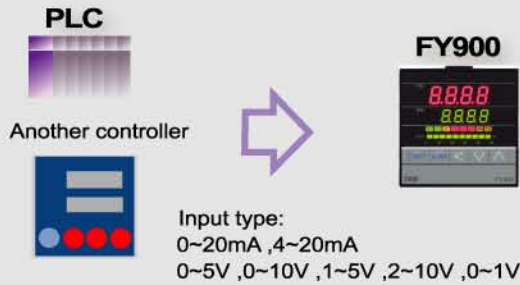

<p>CE Approval & free power</p>	<p>IP65 Proof</p>
<p>All models get CE approval. Operate on any voltage from AC 85~265V at 50/60Hz. DC 24V is also available(optional function).</p>	<p>IP65 dust & water proof is available for all models(optional function).</p>
<p>Heater Break Alarm (HBA)</p>  <p>(Heater Break Alarm) Heater current flowing through CT can be displayed on controller. If heater current is less than HBA set value, AL1 will be activated (optional function).</p>	<p>MODBUS Communication</p>  <p>HMI Controller FY series support both MODBUS RTU and MODBUS ASCII protocol. Communication between controller and HMI or other equipment is more convenient(optional function).</p>
<p>Autotuning (AT)</p>  <p>AT Function can calculate the optimize PID value for your control system, without trying and error manually.</p>	<p>Auto/Manual mode</p>  <p>Click! Conveniently switched between auto/manual output mode by clicking "A/M" key(except "FY400").</p>
<p>Various Indication Lamps</p>  <p>Real time monitor the status of output(OUT1/OUT2), AT, alarm (AL1/AL2/AL3), manual output (MAN) and program(PRO).</p>	<p>Bar-Graph</p>  <p>Output percent displayed on the bar-graph in 10 LEDs resolution(except "FY400").</p>
<p>High Accuracy</p> <p>Input with 14bit A/D resolution, 0.2% accuracy of FS. Built in "AutoZero-AutoSpan" function keep good accuracy.</p>	<p>Data Lock Function</p> <p>All parameters are separated in 3 operation levels. Each parameter can be hidden or locked to prevent unauthorized changes.</p>

Various I/O Types

Peripheral Options

Remote SV

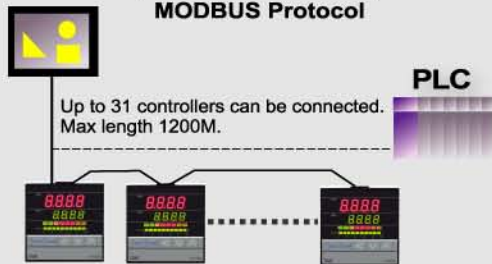

Transmission

Communication

(RS485 Communication)
MODBUS Protocol

Communication

(TTL Communication)
Up to 10 controllers can be connected.
Max length 1M.

Special Application

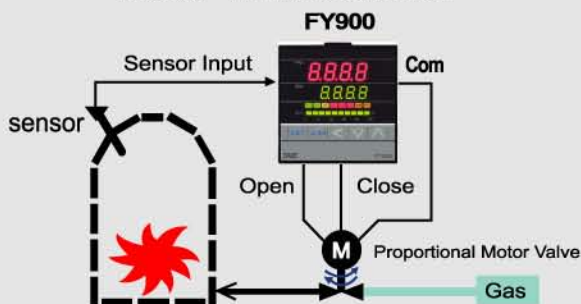

Ramp/Soak Program

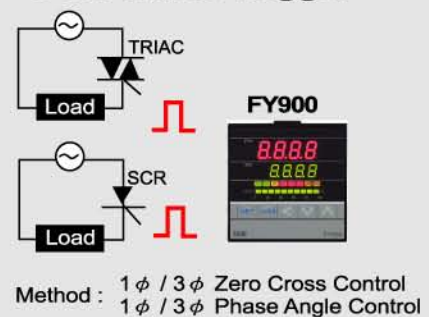

Heating and Cooling Control

Motor Valve Control

SCR/TRIAC Trigger

Excellent Control

Control Method

Fuzzy Logic

Built in fuzzy logic suppress the overshoot due to SV changes or external disturbance.

Autotuning (AT)

When autotuning acts ,it will make PV hunting 1~2 cycle to calculate optimize PID value. To protect user's device , FY series controller can perform PV hunting below SV by setting AT bias value(ATVL) .

Limit Setting

Built in output limit function. Use this function to get different gradient output and set limit for output.

Convenient Installation

Easy Mounting

Just push the mounting bracket to panel. Without using any screws.

New Display Module

New display module design more clear display and easy to read

Alarm Function

Alarm Types

Maximum with 3 sets of alarm.

Alarm types list as below:

Deviation

Deviation High Alarm
Deviation Low Alarm
Deviation High/Low Alarm
Band Alarm

System

System Failed Alarm
System Normal Alarm

PV

PV High Alarm
PV Low Alarm

Program

Program Run Alarm
Program End Alarm
Segment End Alarm

Delay Time

Use this function can avoid alarm acts frequently or acts due to external disturbance.

Hold Function

Use this function can avoid alarm acts at start-up. The alarm action is suppressed at start-up until PV enters the non-alarm range.

Parts Description

SYMBOL	NAME	FUNCTION	SYMBOL	NAME	FUNCTION
PV ①	Measured value (PV)display	Displays PV or various parameter symbols(Red)	OUT1 ⑧	OUT1 lamp	Lights when OUT 1 is on(Green)
SV ②	Setting value (SV)display	Displays SV or various parameter values(Green)	OUT2 ⑨	OUT2 lamp	Lights when OUT 2 is on(Green)
SET ③	Set Key	Used for parameter calling up and set value registration	AT ⑩	Autotuning lamp	Lights when Autotuning is activated(Orange)
A/M ④	Auto/Manual key	Switches between Auto(PID) output mode and Manual output	AL1 ⑪	Alarm 1 lamp	Lights when Alarm 1 is activated(Red)
< ⑤	Shift Key	Shift digits when settings are changed	AL2 ⑫	Alarm 2 lamp	Lights when Alarm 2 is activated(Red)
∨ ⑥	Down Key	Decrease numbers (*Only for programmable controller)	AL3 ⑬	Alarm 3 lamp	Lights when Alarm 3 is activated(Red)
∧ ⑦	Up Key (*Program Run)	Increase numbers (*Only for programmable controller)	MAN ⑭	Manual output lamp	Lights when manual output is activated (Orange)
			PRO ⑮	Program Running lamp	Flashes when program running (Only for programmable controller)
			OUT% ⑯	Output % Bar-Graph display	Output % is displayed on 10-dot LEDs
